

Thermostats

Wide range of thermostats for every application and environment

Application

Frico's thermostats create great comfort and save energy in public and commercial premises as well as in home environments. They control electrical and water borne floor heating, heat pumps, direct effect electric radiators/convectors and air conditioning. They are also extremely suitable for use with electrically or water heated radiant heaters, fan heaters and air curtains. We offer everything from processor controlled wireless thermostats with advanced functions to the simplest bimetal thermostats.

Comfort

Our precise thermostats create an even temperature and good indoor environment. Processor controlled thermostats also offer many variable functions in the same thermostat. A great advantage is the opportunity to control room and floor heating in integration. By limiting the temperature (min/max) of the floor heating, one has a pleasant floor temperature regardless of the season or selected room temperature.

Operation and economy

The thermostats can be used to control either slow systems such as floor heating or faster systems such as electric radiators/convectors. Correct control gives a longer service life of the system and lower energy consumption.

Precise thermostats provide economical heating. With save reduction and weekly program functions one can choose to have lower temperatures, for example at night to give further savings.

A wireless installation is faster, cheaper and especially advantageous for renovation or rebuilding. Thanks to the high protection class of the receiver unit, the wireless thermostats can also be used in more demanding environments.

Design

Timeless and discreet design, which blends in with all environments and gives the possibility of recessed installation. Wireless fitting gives a neater installation.

Product specifications – functions within the range*:

- Programmable function with holiday program for energy saving.
- Wireless function with IP44 classification for the receiver section and triac on the transmitter section for quiet control.
- Digital display for exact setting and reading off.
- Internal and/or external sensors. Possibility of selecting the sensor function and limiting external sensors (min/max).
- Save reduction.
- 2-pole switch, easy to switch off/on.
- Possible to control heat or cooling.
- Protection class up to IP55.
- DIN rail thermostat.
- On/off control (for slow systems) or proportional control (for faster systems) in the same thermostat.
- Temperature range down to -35 °C.

*) See following pages for detailed information or separate product sheet/manual.

Thermostats and controls

T, TK, TD, basic offer thermostats

Processor controlled thermostats for room/floor heating. Available with concealed/visible knob or digital display. Model with visible knob also available with 2-pole switch and in 400 V. External sensor (RTS01) available as an accessory. CE compliant.

TR, recessed thermostats

Processor controlled thermostats for room/floor heating. For recessed mounting, supplied with front and cover frame for both Eljo and Elko. Available with knob or digital display. All models have a 2-pole switch. External sensor (RTS01) included. TRDP16 has an integrated clock with preset weekly program, which simplifies programming the save reduction functions. CE compliant.

TF, wireless thermostats

Processor controlled wireless thermostats for room heating (TFD12 also for floor heating). Available with knob or digital display. High protection class (IP44) for the receiver section with triac control (quiet control). Radio controlled on frequency 433.92 MHz, range 30 metres indoors. External sensor (RTS01) is available for TFD12 as an accessory. TFP12 has an integrated clock with preset weekly program, which simplifies programming the save reduction functions. CE compliant.

TP8, programmable thermostats

Processor controlled programmable thermostat for room heating. Digital display and integrated clock. A number of pre-set weekly programs simplifies programming. Several advanced functions such as save reduction and frost protection. CE compliant.

RTI, electronic 2-step thermostats

Processor controlled 2-step thermostats for room heating /cooling. Available with concealed or visible knob. Adjustable temperature difference between the steps (1–10 degrees). Save reduction function via external connection timer (1–10 degrees). External sensor (RTS01) available as an accessory. High protection class (IP44). CE compliant.

TBK, bimetal thermostats

Mechanical bimetal thermostats with acceleration resistance for room heating/cooling. TBKS10 also has a 1-pole switch. CE compliant.

TDIN10, DIN-rail thermostat

Electronic DIN rail thermostat for control of room/floor heating. Processor controlled. Room and floor sensor included. The desired value can be adjusted $\pm 5\text{ }^{\circ}\text{C}$ on the room sensor. CE compliant.

RTS01, external sensor (accessory)

External sensor of NTC-type 10 Kohm. 3 m cable included.

KRT, capillary tube thermostats

Capillary tube thermostats for room heating/cooling. Available with concealed and visible knob, and control in 1 or 2 steps. KRT2800 controls in 2 steps and has adjustable temperature difference between the steps (1–4 degrees). KRT1901 has a temperature range of $-35\text{--}+10\text{ }^{\circ}\text{C}$. High protection class (IP44 resp. IP55). CE compliant.

ERP, electric heating control

Stepless pulse control intended for single phase (3600W/230V) or two phase (6000W/400V2~) electric heaters. Cannot control 3 phase loads. Pulse time 60 secs. Triac control (quiet control). Integrated temperature sensor. External sensors available as an accessory. Save reduction function via external connection timer (1–10 degrees). For larger power outputs a slave unit (ERPS) can be connected. Each ERPS can handle the same power as ERP. CE compliant.

Accessory ERP

Type	Description
ERPRG	Room sensor ERP
ERPGG	Floor/duct sensor ERP
ERPS	Slave unit ERP

KUR

CBT

Other controls

CIRT, stepless output control with timer

Stepless output control with timer, primarily intended for infrared heaters and other radiant heaters. Intended for single phase (3600W/230V~) or two phase (6000W/400V2~) electric heaters. Especially suited for spot and zone heating. The heat contribution is regulated for best comfort (25-100 %). The built-in timer can be set for 0.5 to 4 or 4 to 24 hours. High protection class (IP44). CE compliant.

S123, manual switch for 1-2-3 steps

Manual switch controls the output in three steps 0-1/3-2/3-3/3. CE compliant.

CZ3, digital time switch

Digital time switch with a weekly program for separate connection of 4 zones. CE compliant.

KUR, digital time switch

Digital weekly time switch with 8 program steps (36 storage positions). Alternating contact. High protection class (IP44). CE compliant.

CBT, electronic timer

Electronic timer with alternating contact. Setting range 1/2-1-2-4 or 4-8-16-24 hours respectively. The setting range can be limited down to a maximum time of 1/2 hours. Hög kapslingsklass (IP44). CE compliant.

Thermostats and controls

ERC, control and regulator centre

The centre includes a main switch, group fuses, and a weekly timer for night temperatures (for energy saving). The heat output can be divided into groups adapted for 2.5 mm² cables, fused 16 A, or for 4 mm² cables, fused 20 A. Each group or zone can be separated from the outside of the box. A time delay between the groups prevents the simultaneous activation of large outputs. For each group, there is a contactor that can be controlled by thermostats.

Most of the electrical connection points are accessible through a plinth, which allows for several control options. It is also possible to connect a load guard so that the electrical input is used to the full.

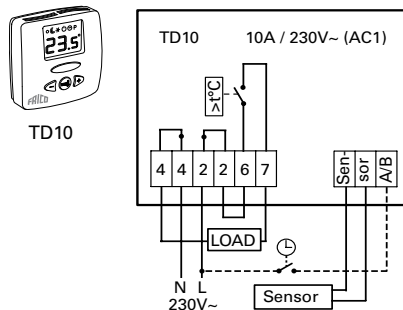

Colour: white.

CE compliant.
